Healthcare Provider Billing & Coding Compliance Guidelines

==========

Official Healthcare & Insurance Knowledge Document

SECTION: Coding Specificity and Unbundling Prohibitions

Hospitals must adhere to standard ICD-10-CM diagnosis coding and CPT procedure coding. All secondary diagnoses and co-morbidities affecting inpatient length of stay must be coded. Unbundling of surgical component codes such as separately billing exploration or incision during a primary laparotomy is strictly prohibited and results in automatic line-item rejection.

SECTION: Pharmacy and Consumables Tariff Regularization

All medications and surgical consumables must be billed at or below the Maximum Retail Price MRP . High-cost surgical devices, biological meshes, and stents must be billed with original supplier invoice copies attached.
