Payer Adjudication Protocols, Clinical Rejection Scenarios & Coverage Criteria

==========

Official Healthcare & Insurance Knowledge Document

SECTION: Medical Necessity Rejection Scenarios

A claim for Total Knee Arthroplasty TKA is denied under MED-01 when the medical records show mild-to-moderate radiologic joint space narrowing without documented failed conservative management. Payer guidelines require evidence of Kellgren-Lawrence Grade 3 or 4 joint degeneration and severe functional disability before arthroplasty approval.

SECTION: Emergency Cashless Rejection Scenarios

Cashless authorization is denied under AUTH-01 if emergency admission intimation is sent after elective operating hours without trauma casualty triage records. To overturn this, the hospital must furnish emergency room admission charts proving acute hemodynamically unstable presentation.
